

In an effort to clarify some of the principal capabilities, features and benefits of the invention the following attachments are provided:

- A. A printed page black and white rendering derived from a color Demonstration Document, which is used in various ways in this filing to establish further clarification of the invention's functions, its data model and aspects of a user interface.
- B. A printed page, which features a reduced in size visual representation of the Demonstration Document, which includes notations as to the nature and characteristics of the original color version of the Demonstration Document used in providing explanation and examples herein.
- C. A rendering of an aspect of a user interface, which is of the type referenced elsewhere in this filing and which, could be part of an interface set used in the initial assessment, modification and associated management of importing files converted to the invention's standard file format and parsed to the invention's data model
- D. A separate representation of the interface example mentioned in item C, above, which associates data represented in this user interface example with pertinent code line numbers derived from the Demonstration Document once it has been translated to invention's standard file format
- E. A listing of the standard file format code numbers associated with the user interface example contained information, which also provides the specific code lines used to provide the user interface contained data
- F. Two separate renderings, which provide visual representation of key usage benefits involved with the invention's data model and system configuration and which, clarify business-related, work execution efficiencies made possible by the invention.

# Demonstration Document

This is a demonstration of the invention, which is used to portray the invention's manner of converting a document containing various graphic elements to objects and relationships consistent with the invention's document archive object model.
